DIGITAL FILE INFORMATION

The following information will help ensure successful printing results through our lab:

Monitor Calibration

We strongly recommend you calibrate your monitor at least every six months. This is the visual equivalent to tuning an instrument such as a piano. We sell calibration devices or can recommend a local calibration expert to do this for you. Your printed results will then look much closer to what you see on screen (and thus your colour and tonal adjustments will be successful).

sRGB Colour Profile

Please convert (or export) all files to the Adobe sRGB colour space. If you supply images in other colour spaces such as CMYK, ProPhoto, Greyscale and Adobe RGB 1998, the colour of your printed images may well be inaccurate. If you're unsure we can convert your files as a service.

Resolution & Sizing

Our printing default is FIT IN so that your images are not cropped unless you specify otherwise.

- **FIT IN (shrink to fit):**
This means that your image will be printed without any cropping to FIT IN the paper ratio requested. Sometimes this may leave white paper on two sides if your file was not the same shape/ratio as the selected paper's shape/ratio.
- **FILL IN (cropped if necessary, to fill the paper):**
This means that if your image ratio/shape is not the same as the requested print size it may crop to FILL IN the paper. This leaves no white paper visible but critical details that are close to the edge may be lost/cropped out.
- **NO RESIZE (Advanced users only):**
This option is only for those who require specific measurements on a requested paper size and no re sizing of the image to FIT or FILL the paper. Save your required file at 300dpi (this is dots *per inch* - *not* per cm).
Note: this is a photographic software setting not a camera setting.

File Format & File Saving

- Choose either JPEG or TIFF
- ALL files must be FLATTENED, 8 bit and include no alpha channels
- Saving as a JPEG - Best to select maximum quality when saving (minimum compression)
- Saving as a TIFF - Byte order: IBM PC with compression set to None, LZW or zip.

ORDERING PRINTS

In-person Print Ordering:

- Either use our in-house kiosks to select images from memory cards or USB flash drives
- Or talk to us and tell us what you need printed.

Online Print Ordering:

- Upload your files from your phone or computer at www.wps.net.nz/lab-order/ and specify sizes, print finish and quantities OR...

ORDERING PRINTS (CONT.)

- If you prefer you can attach images to an email to us (if the total email is under 5MB) to lab@wps.net.nz. See note below on things to tell us when ordering.*
- If you have more than a few images to print, you are best to save them into a folder or album/collection and use a cloud sharing site (e.g. [Microsoft OneDrive](#), [Dropbox](#), [Google Drive](#), [WeTransfer](#) etc) and send us an email to lab@wps.net.nz with a link to your folder of images.*

***For email-attached files or cloud-shared method be sure to tell us:**

- The size prints you want (see options on Prints & Enlargements page)
- If you want matte or gloss
- How many copies of each
- Your phone number.
